4. READER'S COMMENTS

REVIEWER: I have read the manuscript and found it to be well written and clearly presented. The author has done a good job of explaining the methodology and results. The figures are clear and well labeled. The conclusions drawn from the data are reasonable and supported by the evidence presented.

5. READER'S QUESTIONS

REVIEWER: I have a few questions regarding the study. First, could you provide more detail on the sampling method used to select the participants? Second, how did you measure the outcome variables? Third, what was the sample size and how was it determined?

This is a grayscale image showing a dense, textured surface, likely a close-up of a material or object. The texture is composed of fine, irregular patterns that suggest a granular or fibrous structure. The lighting is somewhat dim, creating soft shadows and highlights that emphasize the depth and complexity of the texture. There are no discernible characters, symbols, or other graphical elements.
